LÍNGUA INGLESA – QUESTÕES DE 41 A 50

The Living Dragon

1 Dragons are mythical creatures with slender heads, a body like a dinosaur and a long tail like a lizard. What makes a dragon
2 unique is its ability to spew fire from its mouth or nostrils. Dragons have been the stuff of legends for centuries and contemporary
3 graphic artists enjoy drawing dragons.

4 Do you know that there is a real dragon living on earth today just like it has been for millions of years? While it doesn't breathe
5 fire or rear up ten feet tall, this ancient lizard lives much like it has since prehistoric times. The Komodo dragon was discovered only
6 about a century ago on the remote Indonesian Islands of Komodo, Gila Motang, Rinca, and Flores near the equator between the
7 Pacific Ocean and the Indian Ocean. The Komodo dragon is an endangered species; there are only 3,000 to 5,000 left. They are
8 known to live about thirty years.

9 The adult Komodo dragon is a huge creature, growing to a length of 3 m and a weight of more than 136 kilos. They are the
10 heaviest of all lizard species. They are carnivores that prey on other animals like wild pigs, deer and even water buffalo which also
11 inhabit the islands. A Komodo dragon can eat as much as eighty percent of its body weight in a single feeding! The Komodo dragon
12 is a reptile and, like its cousins the alligator and crocodile, the dragon has powerful legs and jaws as well as sharp claws and teeth
13 well-suited for larger prey. The Komodo dragon can run up to twenty nine kilometers per hour over a short distance.

14 The Komodo dragon doesn't need to run after fast prey like wild pigs and deer. While alligators and crocodiles lie in wait for prey
15 in the water, the Komodo dragon camouflages itself on land and uses its powerful legs to reach passing animals. If the prey is not
16 caught in the sharp teeth and powerful jaws, it will quickly die from the dragon's bite. Komodo dragon saliva contains over fifty kinds
17 of bacteria that, while harmless to the dragon, will kill another animal within twenty-four hours. The dragon uses its keen sense of
18 smell and simply follows the trail to its next meat.
